

Garden of the Senses

All Foods Begin With A Plant

This is not your ordinary garden program! It's interactive with hands in the soil and children learning how food traces back to plants. In this 1.5 hour program, children will:

-  Tour the **Garden of the Senses**, using the five senses of scent, sight, sound, taste & touch to explore the garden.
-  Trace food products back to their original ingredients as plants.
-  Flowers, leaves, stems & roots: Children will learn the parts of plants that are edible. Working together, they will take these food products and turn them into a tasty, creative dish for all to taste!
-  Plant a vegetable seed to take home and watch grow.
-  Explore nature with fun activities, but in their own way!
